15. Kembali ke direktori c. Untuk membuat folder baru dapat menggunakan perintah **md** dan **mkdir**, sedangkan untuk menghapusnya menggunakan perintah **rd** dan **rmdir**

The image consists of two screenshots of a Windows command prompt window, titled "C:\Windows\system32\cmd.exe".

The top screenshot shows the execution of the command `c:\>md baru`, which is highlighted with an orange box. Below this, the `dir` command is entered, displaying the directory contents of `c:\`. The output lists various files and folders, including `AMD`, `baru` (highlighted with an orange box), `files`, `files2`, `FPC`, `Inprise`, `Intel`, `OS`, `PerfLogs`, `Program Files`, `Program Files (x86)`, `Python27`, `Users`, `Windows`, and `xampp`. The summary at the bottom indicates "1 File(s) 110 bytes" and "16 Dir(s) 42.725.761.024 bytes free".

The bottom screenshot shows the execution of the command `c:\>rd baru`, which is highlighted with an orange box. Below this, the `c` command is entered, resulting in an error message: "'c' is not recognized as an internal or external command, operable program or batch file." The `dir` command is then entered again, showing the directory contents of `c:\`. The output is identical to the top screenshot, but the `baru` folder is no longer present in the list, and the `AMD` folder is highlighted with an orange box.

The first screenshot shows a Windows command prompt window with the title 'C:\Windows\system32\cmd.exe'. The command 'c:\>mkdir baru1' is entered and highlighted with an orange box. Below it, the command 'c:\>dir' is entered, and the output shows a directory listing for 'c:\'. The folder 'baru1' is listed among other directories, and it is highlighted with an orange box.

The second screenshot shows the same command prompt window. The command 'c:\>rmdir baru1' is entered and highlighted with an orange box. Below it, the command 'c:\>dir' is entered, and the output shows a directory listing for 'c:\'. The folder 'baru1' is no longer present in the listing, and the folder 'files2' is highlighted with an orange box.

16. Ketikkan perintah **md \komputer** untuk membuat folder bernama komputer di dalam drive c, kemudian cek dengan perintah **dir**

The screenshot shows a Windows command prompt window with the title 'C:\Windows\system32\cmd.exe'. The command 'c:\>md \komputer' is entered and highlighted with an orange box.
